Personal Virtual Assistant

1. General Description of the project –

I am will make 'Personal Virtual Assistant' using python. I will be using API integration in my project to fetch the answer of the questions asked by the user. I am planning to present the virtual assistant in a GUI format. For GUI I will use Tkinter library of python.

2. Functional Requirements –

a. User will be able to ask questions to the virtual assistant by typing in the textbox the question.

b. Answer will be provided in a separate textbox.

c. Buttons will be provided for

1. Showing the answer
2. Clearing the text field
3. Closing the program
